

Step 1

Create a service in Global mode using the nginx image

```
$ docker service create --name testnginx -p 5901:80 --mode global --detach=false nginx
```

Validate service is created

```
$ docker service ls
```

Validate how in how many instances the service is running & Validate the service mode is Global

```
$ docker service ps testnginx
```

Step 2

Try to scale the service using replicas and scale commands

```
$ docker service update --replicas 5 testnginx
```

```
$ docker service scale testnginx=1
```

What happened?

Step 3

Review service logs

```
$ docker service logs testnginx
```

Step 4

Remove the services

```
$ docker service rm testnginx
```
